

The hover effects in stories category can be achieved by using the following structure. There's gonna be a `<ul>` with `.posts` class that will contain the links, in such manner:

```
<ul class="posts">
  <li>
    <a class="modal-trigger" href="#pink-sunglasses" data-slug="pink-
sunglasses">Pink sunglasses</a>
  </li>
  ...
</ul>
```

Then, you will also need a `<div class="posts-covers">` element containing the full-screen images that appear on title hover. It looks like this:

```
<div class="posts-covers">
  <div class="pink-sunglasses" style="background-image:
url(./assets/images/lady/lady-pink-sunglasses.jpg)"></div>
</div>
```

*Note:* the link `data-slug` value must correspond to the class of the `.posts-covers` element.
